

# EGRIPMENT JAN JIB

Reach.....	105-304 cms (3.5-10 ft)
Max. Platform Height .....	168-368 cms (5.6-12.1 ft)
Maximum Load .....	45-9 kgs (99-20 lbs)
Length Operational .....	204-412 cms (6.7-13.6ft)

**The Egripment JanJib System** offers a completely new method of building a Jib Arm. As a result of a unique modular system, the operator can now create a variety of 10 different jib arms lengths and configurations using a single center trunnion section, one basic front section and one basic rear section.

The JanJib System is constructed from lightweight Aluminum sections which were specially designed for this application by an in-house engineering team. These sections clip together quickly and easily, yet the JanJib is very strong and rigid, which offers camera operators top quality steady camera movement. The JanJib also includes the high quality bearing system. This assures the smooth movement that camera operators have come to expect.
